

THE LAST S.O.S.

***“Life on Earth risks to become extinct.
If you don’t save the environment immediately,
there will be no future for anyone”***

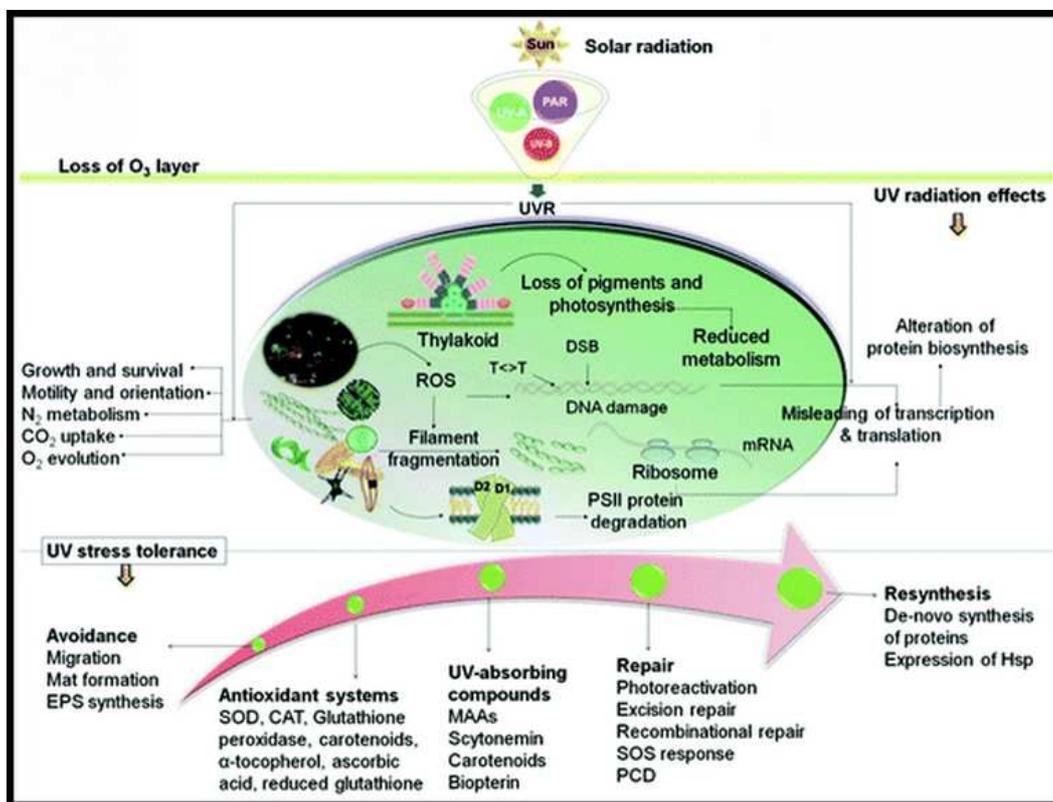

Isha Babaji

Due to global pollution, the Ozone Layer has been almost entirely destroyed. This "Layer", which is located around the Earth, had to protect us especially from UVB and UVC rays. Because of its destruction, the burning, carcinogenic and deadly UVB and UVC rays are increased by 1,400%. Therefore we are almost no more protected. If this "Layer" were to be further or completely destroyed, Life on Earth would die within a few minutes. The strong soaring of global warming, the destructive annual fires of entire forests in Northern California and throughout the world, the increase in strong temperature changes, tornadoes, cyclones, hurricanes, hailstorms, snowfalls, floods, extreme drought, especially in the equatorial regions, the increase in volcanic explosions and earthquakes, the fast melting of the poles, the slowing down of the Gulf Stream that regulates all climates on Earth and all climatic upheavals are mainly caused by the destruction of this "Layer". Scientists say we have a few years of life left, if nothing is done to avoid our extinction: the "Sixth Extinction of Humanity".

IMMINENT A COLLAPSE OF THE OZONOSPHERE

The US researcher Dane Wigington has recently proposed an article on the disintegration of the ozone layer, based on the acquisitions of a scientist who worked for N.A.S.A. Are the disturbing conclusions to which the specialist, an insider, arrived at plausible? The geoengineering undercover activities continue to destroy the vital systems of the planet, including the ozone layer. An engineer, who worked for N.A.S.A. and is now working with GeoengineeringWatch.org (the Dane Wigington site, n.d.t.) has published a terrible report about the deterioration of the ozone layer. The expert has been monitoring the level of ultraviolet radiation with an ad hoc equipment for some time, and has noticed that it is constantly increasing. The increase of UV rays is not due to the increased solar activity, which is instead rather weak, but a symptom linked to the disintegration of the triatomic oxygen (O₃) "coat". [...] Although many anthropogenic factors that negatively affect the ozone layer can be counted, illegal geoengineering interventions are by far the most damaging.

Many sources of the mainstream and official channels falsely claim that the ozone layer above the southern hemisphere is "recovering" (this with the aim of reassuring public opinion), however the information collected and analyzed deny this version. The same regime sources do not even mention the massive and increasing damage to the ozone "shield" over the northern hemisphere. The effect of the exposure to UV radiation is very evident on the sunny sides of many tree species. All forms of life that are affected by increasingly excessive [1] UV radiation are endangered: in the oceans, especially cetaceans and plankton. If the ozone layer were to collapse completely, the flora and the fauna, both marine and terrestrial, would be affected in a worrisome way.

[1] UV radiations induce genetic mutations. Source: geoengineeringwatch.org

CARCINOGENS, DEADLY UVB AND UVC RAYS ARE BURNING THE PLANET

UVB rays have increased about 1400% along with UVC rays, due to the destruction of the ozone layer. That's why the forests of Northern California are burning for several years. Life on Earth was born only after the creation of this layer. The imminent disappearance of the ozone layer, which protects us from the dangerous and deadly UVB and UVC rays, can determine the end of life on earth. There is a solution, but it requires the commitment of all of us.

Ozone is a gas composed of three atoms of oxygen that plays the important function of protection from dangerous UV ultraviolet rays. The ozone layer around the Earth's atmosphere was formed over millions of years as a result of the activity of blue-green algae. These organisms have created most of the oxygen present in the atmosphere. The large "roof" of ozone has allowed life to leave the waters to conquer the land without incurring solar ultraviolet radiation. Evolution then made its way up to man and to the world we know today. Our own lives completely depend on the ozone layer.

In the course of time the ozone layer, called ozonosphere, has continually changed thickness and shape because of natural causes. In recent decades, the concentration of ozone in the stratosphere has begun to dwindle also because of the effect of many hazardous pollutants released by man into the atmosphere. The change is not a gradual trend anymore but abrupt and sudden. Particularly serious is the depletion of the ozone layer over the South Pole, which has become so great to make the media talk of "ozone hole".

VARIOUS TYPES OF UV RAYS

UV rays are divided into:

- UV-A (400-315 nm), salutary, tanning, creates sunburn less rapidly than the UV-B rays.
- UV-B (315-280 nm), dangerous, cause burns in a short time, they are carcinogenic and deadly.
- UV-C (280-100 nm), dangerous, cause sunburn in a short time, are carcinogenic and deadly.

CONSEQUENCES OF THE OZONE HOLE

What are the consequences of ozone depletion? The lack or absence of ozone in the upper atmosphere undermines the natural filter against solar UV rays resulting in the growth of the risk of skin cancer and DNA mutations. The unfiltered sun rays gradually inhibit the photosynthesis, resulting in less growth of plants and lower production of oceanic phytoplankton (the first link in the sea food chain). As the ozone layer has been the basis of terrestrial life, its disappearance may determine the end of life on Earth.

All poisons used in agriculture (pesticides, herbicides, GMOs, chemical fertilizers, etc.) create and worsen the ozone hole. Some substances, such as methyl bromide, a widely used ingredient of pesticides, has damaged and continues to damage the ozone layer, compromising the protective shield function from lethal ultraviolet rays that, without a "shield", would completely burn the Earth making it similar to Mars, the "red Planet."

In addition to methyl bromide, also chlorine, fluorine, etc. contained in pesticides,

herbicides, etc., by evaporating, destroy the ozone coat that protects the planet from harmful ultraviolet rays much more effectively and strongly compared with chlorofluorocarbons, which were used in refrigerators. Although the chlorofluorocarbons (CFCs) were banned, their action will continue to destroy the ozone layer for about a century. In addition to that, there are also substances and "human activities", for instance gas and chemical elements that have destroyed and continue to destroy the ozone coat that protects us from harmful UV rays. These substances and "human activities" are:

- geoengineering (chemtrails, etc.)
- nitrogen oxides
- space fuel chlorine and fluorine,
- civil and military aviation fuels,
- pesticides based on methyl bromide,
- chlorine,
- fluorine,
- chlorofluorocarbons (CFCs)
- idroclorofluorocarburu (HCFCs)
- bromofluorocarbons such as Halon, a gas that is used to extinguish fires,
- methyl chloroform,
- carbon tetrachloride,
- volatile compounds which include chlorine or bromine atoms within their structure etc.

Chlorine, fuoro, methyl bromide, etc., contained in pesticides, herbicides, etc. they destroy the ozone mantle with much more efficacy and intensity than CFCs (chlorofuorocarbons) that were used in refrigerators. The CFCs released until today in the atmosphere will continue to destroy the ozone layer for about a century.

GEOENGINEERING IS DESTROYING THE OZONE LAYER

by Dane Wigington, geoengineeringwatch.org

We have known for some time that the UV levels were getting rapidly worse due to the ongoing atmospheric spraying. Anyone that is even slightly awake and aware has noticed that the sun feels incredibly intense on the skin. Most varieties of plant life are showing at least some signs of stress in most areas. In many regions, whole forests are in steep decline. And is getting worse day by day.

Although extreme drought and toxic rains (due in large part to the heavy metal fallout from geoengineering) are taking their toll, recent metering of UV levels in Northern California indicate that there is an element in this die off that is far worse than we had realized, an incomprehensibly high level of UV radiation.

With the assistance of a very generous and conscientious individual, geoengineeringwatch.org purchased top-of-the-line UV metering equipment which was put in the hands of a 40-year environmental metering veteran, with 20 years government experience and 20 years as a private consultant. Our findings are far beyond shocking.

From a recent science study on excessive UV:

We are told UV-B is only a minor component of the total solar radiation, we now know this could not be further from the truth. Our recent metering reflects an exponential rise in UVB radiation. Due to its high energy, its potential for causing biological damage to plants, animals, and humans is exceptionally high and even small increases could lead to significant biological damage. There are numerous peer reviewed studies which verify this fact.

The Results

According to agencies like WHO, (World Health Organization) and a long list of other recognized government sources of UV information like NOAA (National Oceanic and Atmospheric Administration), no more than 5% of the total UV reaching the surface of Earth should be UVB. The other 95% should be UVA.

These agencies go on to state that UVC should be ZERO.

What has our testing shown?

UVB – the most lethal form of UV radiation – has now escalated to almost 70% of the total UV reaching the surface of our planet. At least this is the case in Northern California. (This

can only mean that total Ultra-Violet exposure has also escalated sharply, making overall UVB levels worse still.)

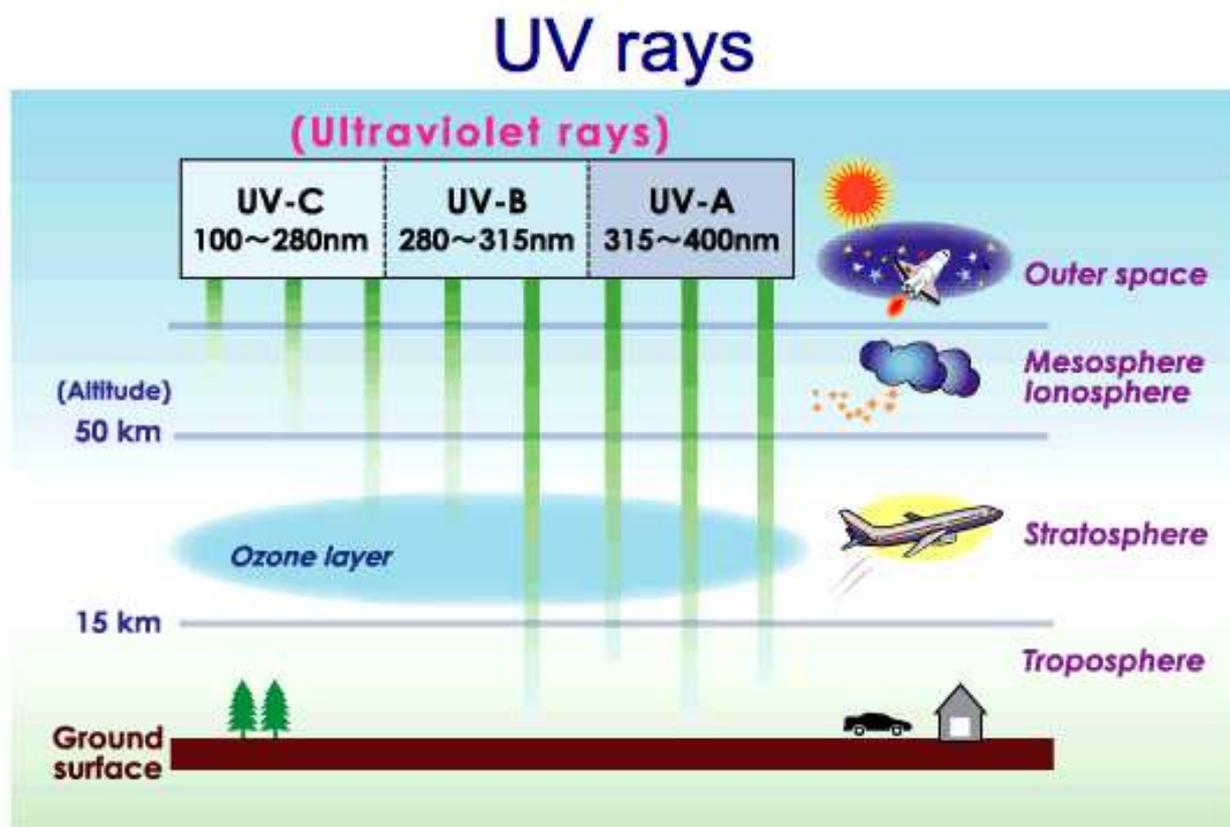

In addition, our testing has consistently shown significant levels of UVC which used to be filtered out by the ozone layer, some 100,000 feet up in our atmosphere.

Not any more.

UV is measured in spectral bandwidths. The higher the bandwidth, the more benign the UV; lower bandwidths are more lethal.

Current testing reveals that almost 70% of incoming UV radiation is currently in the UVB and UVC range. (Not 5% or less, as we are being told by all major agencies and their media mouthpieces).

This translates into nearly a 1,400% increase in UVB as a percentage of total UV. If UVA has also gone up due to the same ozone destruction which has driven up the UVB, this would indicate a likelihood that the total UVB and UVC is higher still - not just a difference of ratio with the same overall number.

Center for Global Environmental Research, National Institute for Environmental Studies Japan

WHAT ARE THE KNOWN NEGATIVE EFFECTS OF EXCESSIVE UV EXPOSURE TO PLANT LIFE?

The Proof On The Ground

In the forests of Northern California, bark is literally being scorched from trees. On many specimens, only a thin strip of bark remains on the shaded side of the tree. Foliage is being scorched with many trees having only a fraction of their normal leaf cover. Many native species of plants are not even sprouting any more. The organisms that do still manage to grow appear miniaturized in some cases.

What are just some of the results of excessive UV exposure to plants?

- Can stop sprouting of seeds,
- Stunts growth,
- Limb die off,
- Reduced foliage,
- DNA damage,
- Changes nutrient distribution,
- Mutations,
- Effects photosynthesis
- Greatly increased mortality

Some known effects of excessive UV exposure to aquatic life:

All aquatic life is particularly vulnerable to high UV levels.

Phytoplankton accounts for some 30% of the worlds intake of animal protein. Phytoplankton and the microorganisms they consume are killed by excessive UV levels. (Global plankton populations have already been reduced by 40% to 50%. Much of the die off is likely due to increased UV radiation.)

Less plankton = less carbon-dioxide absorption.

Less plankton = less oxygen production. (Atmospheric oxygen content around the globe declining rapidly)

Less plankton = less fish. Period.

Bottom line: A crashing plankton population can affect the entire food chain and all life on earth.

Excess UV kills coral reefs. So do waters warmed and made acidic by CO₂ fallout. (Reefs are the nurseries of many crucial aquatic species and are in sharp decline around the globe.)

Some of the known effects of excess UV on humans:

- Damaged immune system,
- DNA damage
- Damages sight
- Causes various forms of cancer

MASS EXTINCTION UNDERWAY, MAJORITY OF BIOLOGISTS SAY

*Washington Post - By Joby Warrick - Staff Writer
Tuesday, April 21, 1998 (Most recent update: May 28, 2017).*

A majority of the nation's biologists are convinced that a "mass extinction".

The rapid disappearance of species was ranked as one of the planet's gravest environmental worries, surpassing pollution, global warming and the thinning of the ozone layer, according to the survey of 400 scientists commissioned by New York's American Museum of Natural History.

"The speed at which species are being lost is much faster than any we've seen in the past -- including those [extinctions] related to meteor collisions," said Daniel Simberloff, a University of Tennessee ecologist and prominent expert in biological diversity who participated in the museum's survey. [Note: the last mass extinction caused by a meteor collision was that of the dinosaurs, 65 million years ago.]

GEOENGINEERING AEROSOLS DESTROY THE OZONE LAYER

This is not speculation, it is fact. There is a mountain of science data that confirms the ozone decimating effect of sunlight-reflecting particulates in the upper atmosphere.

As geoengineering climate modeler Ken Caldeira warned after crunching the numbers for Dr. Edward Teller's aerosol "sunscreen", the resulting rapid cooling of the stratosphere causes the formation of huge ice clouds that attract and concentrate ozone-destroying chemicals.

In addition, high nitrogen oxide emissions from fleets of aerosol-spreading jet tanker aircraft – and more than 93,000 daily airline flights – directly attack Earth's protective ozone layer.

Though many of these "science studies" do not admit geoengineering is already going on, this fact is not hard to confirm for any that do even the slightest investigation. Numerous references are posted below this article.

AT A CROSSROAD

The gravity of our collective crisis cannot be overstated. Current UV metering makes clear we are now being exposed to dangerously high levels of UV radiation, specifically UVB and UVC.

The metering performed in Northern California, on which this statement is based, was done by a pair of identical state-of-the-art, brand-new, science-grade meters guaranteed to be scientifically calibrated to a range within 4%. As stated earlier in this article, the tech who did this metering is a 40- year veteran in environmental measurement and interpretation.

Here in Northern California, we are already seeing frighteningly visible damage to foliage, trees, and plants. The ramifications of extremely high UV levels to all life forms – including us – are grave. As the die-off of other species go, so will we. We are in the 6th Great Mass Extinction – right here, right now! (References below)

If geoengineering continues unabated, and the ozone layer is completely destroyed, it will be game over for us all. No ozone layer = no life on Earth.

IT'S THAT SIMPLE.

- Global geoengineering is tearing apart the entire fabric of life on our planet.
- Geoengineering is poisoning our air, waters, and soils.
- Geoengineering is pushing increasingly erratic atmospheric processes resulting from human-propelled climate change past the Chaos threshold into unpredictable, self-reinforcing, cascading events.
- Geoengineering is disrupting the jetstream and all natural weather patterns, which in turn is fueling catastrophic climate feedback loops – the most dire of which are mass methane hydrate releases from the Arctic tundra and seafloor.
- Geoengineering is destroying the stratospheric solar radiation shielding, which protects all life on Earth.
- Alarmism? Do your own honest investigation and find out.
- Global awareness of these lethal programs is rising quickly, but not fast enough. Its up to all of us to help shine the light on this life-or-death issue. Every day counts.

REFERENCES

From Harvard Magazine - Harvard scientist

The Science paper notes that loss of ice in the Arctic threatens to release significant amounts of carbon dioxide and methane from the soils of Siberia and Northern Alaska, potentially accelerating climate change. The researchers also note that an increasingly cited remedy for climate change—geo-engineering the climate by launching sulfate particles directly into the atmosphere in order to reflect sunlight away from Earth—would accelerate the process of ozone loss by increasing the reactive surface area for the conversion of chlorine to free radical form, as was observed after the eruption of Mount Pinatubo in 1991.

From EPA

UVB: a band of ultraviolet radiation with wavelengths from 280-320 nanometers produced by the Sun

UVB is a kind of ultraviolet light from the sun (and sun lamps) that has several harmful effects. UVB is particularly effective at damaging DNA. It is a cause of melanoma and other types of skin cancer. It has also been linked to damage to some materials, crops, and marine organisms. The ozone layer protects the Earth against most UVB coming from the sun. It is always important to protect oneself against UVB, even in the absence of ozone depletion, by wearing hats, sunglasses, and sunscreen. However, these precautions will become more important as ozone depletion worsens. NASA provides more information on their web site.

UVC: a band of ultraviolet radiation with wavelengths shorter than 280 nanometers

UVC is extremely dangerous, but it is completely absorbed by ozone and normal oxygen (O₂). NASA provides more information on their web site.

Geoengineering would destroy the ozone layer

A Geo-engineering conference was held in Canberra this week see here. 'Geo-engineering' is taking radical steps to dramatically and rapidly cool the planet.

One of the ideas being discussed at the conference is to fire sulfa particles into the atmosphere, one professor has spoken out about this:

Professor David Karoly, of the University of Melbourne's School of Earth Sciences, says another 'pie in the sky' solution is to shoot sulfur particles in the atmosphere to shield the earth from the sun.

He says that would destroy the ozone layer.

"Ozone depletion would cause more UV radiation which would cause skin cancers – killing people," he said.

"We know the mechanism for this, because it's the process that affects the Antarctic ozone hole."

To stop global warming with a chemical shield: the madness of Harvard scientists.

Being able to stop the fever of the globe with a chemical shield in the sky, this is the idea of Harvard University researchers who are putting an original system to cool the planet. Global warming is a reality we are dealing with now, but a group of Harvard researchers have in mind a drastic solution to solve the problem: send balloons at 20 kilometers altitude to spread a cloud of particles and block the sun rays even only 1%, in order to cool the planet. In practice the idea is to create artificially what happened several times with powerful volcanic eruptions, like that of the Pinatubo in the Philippines which in 1991 projected 10 km³ of ash into the atmosphere. The result? Average global temperatures over the next 2 years have decreased by half a degree. The team of American scholars has obtained the green light and next year the project will literally take flight. First of all they will spray water vapor or calcium carbonate, so if it will succeed, in 2022 they will spray very small particles, of one thousandth of a millimeter, of aluminum oxide or carbon derivatives. Therefore it is a geoengineering project, that is to say the use of engineering to change the climate of the planet, a word that however shakes the wrists of many people and many climatologists are already in alarm. As reminded by the experts, climate is a complex system and cannot be changed so brutally without taking the risk of unpredictable collateral effects that could trigger a new ice age. (Excerpt from TG2 dated 27-03-2017)

GLOBAL WIFI FROM SPACE WILL DESTROY OZONE LAYER

The planned global distribution of Wi-Fi from space could destroy the layer of ozone, aggravate climate change and threaten life on Earth.

Press release of the Global Union to Block Radiation Development from Space, Global Union Against Radiation Deployment from Space (GUARDS).

Five companies are gearing up to provide high-speed global WiFi coverage from space within the next three to four years. This would be an ecological and public health nightmare, according to a recently-formed international coalition: the Global Union Against Radiation Deployment from Space (GUARDS).

According to GUARDS, the extensive satellite networks required will endanger the ozone layer and significantly contribute to climate change. Rocket exhaust contains ozone-destroying chlorine, water vapor (a greenhouse gas), and aluminum oxide particles, which seed stratospheric clouds. Complete ozone destruction is observed in the exhaust plumes of rockets.

The New York Times (May 14, 1991, p. 4) quoted Aleksandr Dunayev of the Russian Space Agency saying “About 300 launches of the space shuttle each year would be a catastrophe and the ozone layer would be completely destroyed.”

“About 300 launches of the space shuttle each year would be a catastrophe and the ozone layer would be completely destroyed.”

At that time, the world averaged only 12 rocket launches per year. Maintaining a fleet of (ultimately) 4,000 satellites, each with an expected lifespan of five years, will likely involve enough yearly rocket launches to be an environmental catastrophe.

GUARDS' second area of concern is WiFi itself. Although widely perceived as an unqualified good, WiFi operates using extremely rapid pulses of microwave radiation—the same radiation used in microwave ovens.

And a parade of studies continue to be published and ignored implicating wireless technology in the die-off of forests, the demise of frogs, bats, and honey bees, the threatened extinction of the house sparrow, and damage to the DNA of the human species. It is vital to the continuation of life that large parts of the earth be spared from the incessant radiation that accompanies wireless technologies.

“The human body”, says Dr Gerard J. Hyland, of the University of Warwick, UK, “is an electrochemical instrument of exquisite sensitivity”, noting that, like a radio, it can be interfered with by incoming radiation. If a signal can operate a mechanical device, it can disturb every cell in the human body.

On February 7, 2014, the U.S. Department of Interior stated that “the electromagnetic radiation standards used by the Federal Communications Commission (FCC) continue to be based on thermal heating, a criterion now nearly 30 years out of date and inapplicable today” in reference to guidelines governing WiFi radiation frequencies.

In 2011 the World Health Organization classified radiation emitted by cell phones, and other wireless commercial infrastructure such as WiFi and smart meters as a Class 2B possible human carcinogen, along with lead, engine exhaust, and DDT. Yet, the global WiFi projects would make this exposure ubiquitous and inescapable.

A recent letter sent by 88 organizations, representing over a million people, to the European Economic and Social Committee outlines how governments are betraying the public trust by ignoring the hazards of radio frequency/microwave (RF/MW) radiation.

GUARDS objective is to stop the implementation of global WiFi, that would violate the Nuremberg Code of Human Rights for non-consensual experimentation.

Who: Global Union Against Radiation Deployment from Space (GUARDS)

GUARDS is an international coalition against global WiFi from space, a complex technology of radiation and toxic chemicals endangering all life on Earth.

Contact: Ed Friedman, Maine USA, 207-666-3372 edfomb@comcast.net

The US, through the "Elon Musk" project, will bomb us electro-magnetically and destroy the Ozone layer.

The United States Federal Communications Commission has approved "Elon Musk ", the SpaceX company project which plans to send almost 12,000 satellites to space to form the largest satellite network in history. Of these 12,000 satellites, 50% can be launched within 6 years from the authorization, the remaining 50% in the following 3 years.

Fast Internet for everyone, but not only, as well as exponentially increasing amount of orbital debris and density of electromagnetic fields, the "Elon Musk" project could hide even greater dangers: a dual use technology that, in the hands of the pentagon could turn into a powerful orbital radar capable of scan the entire terrestrial surface. On the other hand, Washington has never hidden his own targets. Last February, the StratCom commander, John. E. Hyten, had stated that the time was ripe for the creation of an orbital radar capable of tracking ballistic missiles and hypersonic weapons.

THE GREAT GULF STREAM IS FADING AWAY NEVER SO WEAK FOR 1600 YEARS

Global scheme of ocean circulation, in red the surface, in blue the deep one.

The great Gulf Stream is a key component for all global ocean circulation. Losing it would mean catastrophic and unpredictable climatic consequences, an increase in Atlantic storms and tropical hurricanes, and particularly severe winters for Europe. The warning was launched by the scientific community after discovering that the gulf current is at its historical lowest, never so weak for 1600 years ...

The Gulf Stream acts like a conveyor belt, picks up the warm waters of the Gulf of Mexico and drags them north-east into the Atlantic, enveloping most of the British Isles and the North Sea. When this hot water reaches the polar latitudes then it cools and sinks backwards, closing the cycle. It is the most effective thermoregulation mechanism on the planet, without it the polar currents would have an easy life, strongly influencing the winters also at medium latitudes, above all European and making them particularly rigid. But not only this..,

A research recently published in the scientific journal Nature by the University College of London (UCL) and the Woods Hole Oceanographic Institution (WHOI) has shown that the Atlantic thermohaline circulation has been declining since the 1800s. Up to now it has lost 20% of its effectiveness. Why is it happening? Because global warming is melting the ice of the North Pole and favoring a large intake of fresh water in the North Atlantic that overlaps with the salt water from the Gulf of Mexico causing it to sink towards the ocean floor before it reaches the high latitudes. This is a worrying trend that could accentuate the effects of climate change, such as rising sea levels on the east coast of the United States and the disruption of meteorological conditions in North America, Europe and North Africa, including increased frequency of extreme weather events such as floods, droughts and winter storms.

(Source: <https://www.3bmeteo.com>)

The Gulf current is slowing down

First it was just a theory: now a study reports a 30% decrease in almost 50 years.

LONDON – The global warming of the Earth will lead to a period of colder climate. It seems a contradiction, but it is what is already happening and whose acceleration can cause catastrophic consequences. The confirmation comes from an article that will be published on December 1 in the journal «Nature» on the Gulf Stream, the huge flow of warmer and saline water that starts from the tropical waters around the Gulf of Mexico to get to the extreme north of Europe. If it were not for this current to bring heat, Scandinavia would be uninhabitable and the British Isles would be frozen like the Canadian coasts at the same latitude on the opposite side of the Atlantic. Well, the study carried out by the National Oceanography Center of the University of Southampton (Great Britain) now irrefutably proves what was previously only a theory supported by some data: the Gulf Stream is slowing down. In almost 50 years the flow has decreased by 30%.

SLOWED FLOW - The researchers traveled on a ship along the 25th parallel between the Bahamas and West Africa. Every 50 kilometers they measured the salinity and the temperature of the Atlantic water. Similar findings were made in 1957, 1981, 1992 and 1998. The surprise was to find that the flow of water from the Gulf Stream decreased by 30%.

WATER LESS DENSE - According to the scientists, the blame is due to the large flow of less salty and colder water coming down from the north due to the melting of the Arctic glaciers (Greenland and North-Canadian islands) and the flow of the Russian rivers, swollen by greater rains in Siberia, into the glacial Arctic sea. The inflow in the North Atlantic of less salty and colder water is such that the average density of water has decreased and therefore has slowed the motion of the Gulf Stream towards the north. (...)

Now it is time to seek information and act
in order to save the Planet and Humanity!

*"We are all on the same "Ship" called "Earth".
Either we sink together because of unconscious actions without love,
or we all save together thanks
to actions that act on the real causes of problems."*

IS A NEW GLACIAL ERA IMMINENT?

The scientists confirm it! LET'S ACT NOW!

The destruction of the Ozone Layer caused by all human activities has reached extreme levels. The Ozone Layer is a Layer formed by three oxygen atoms (O_3) that is found around the Earth, it acts as a barrier protecting us from UV rays (ultraviolet) above all from carcinogenic and deadly UVB and UVC rays. Without this "Layer" Life on Earth would die within a few minutes.

In addition to the "Ozone Holes" at the North and South Poles, the "Ozone Layer" has thinned enormously over the whole Earth. We can say that this "Layer" is almost totally destroyed.

This "destruction" has increased the "burning", carcinogenic and deadly, rays by 1400% UVB and UVC especially in northern California whose forests burn for years due to the destruction of the Ozone Layer.

Therefore UVB and UVC rays are affecting the Earth in massive doses, increasing global warming very fast and burning whole forests. The same "burning rays" are causing the fast melting of the Poles whose fresh waters, mixed with the salty waters of the ocean are slowing down enormously the Gulf Current that regulates climates all over the Earth. That's why climates have gone crazy. Due to the Destruction of the Ozone Layer, the Gulf Stream is slowing down.

Therefore we risk entering a "New Ice Age" within a short time and suddenly. All independent scientists of the world have warned Humanity about the "imminent" entry into a new Ice Age caused by the strong slowing-down of the Gulf Stream. It has slowed by 30% and this slowing-down is increasing day by day.

THINNING OF THE OZONE LAYER

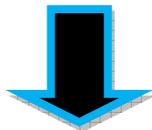

DIZZYING INCREASE OF UVB AND UVC RAYS

STRONG SURGE IN GLOBAL WARMING

FAST MELTING OF THE POLES AND GLACIERS

STOPPING OF THE GULF STREAM

**NEW GLACIAL ERA
(destruction of Humanity)**

This information is not given officially by the politicized mass media. In fact they protect the interests of governments and corporations, the same interests that have allowed the destruction of the Ozone Layer (manufacture and sale of rocket fuels, planes, chemical fertilizers, pesticides, etc., containing chlorine, fluorine and many other gases that destroy the ozone).

All environment protection agreements, such as the Kyoto protocol for the Climate, have been trampled by all governments of the world. Governments have us abandoned us, therefore we must act "by ourselves". If we act now, immediately, by implementing the "Spirulina Project" that you find below, we can make it.

The excess of heat on the whole planet caused by the destruction of the Ozone Layer and the consequent climatic imbalances are causing the detaching and intense moving of the tectonics plates of the Earth causing strong volcanic eruptions, earthquakes, destruction of houses, activities, etc., that almost everybody can testify. Humanity must know that the strong increase of earthquakes, of volcanic eruptions, of powerful temperature changes with strong thunderstorms, hailstorms, extensive fires, hot-cold excesses, strong cyclones and hurricanes, destruction of houses, crops, activities, floods, strong climatic and environmental imbalances are all caused by the destruction of the Ozone Layer. All other causes (CO₂, industrial pollution, etc.) are "minor" and affect minimally by comparing them with everything that the Earth is undergoing due to the destruction of the Ozone Layer. The Earth will become then a "Red Planet", first "burned" and then "glaciated", and within a short time, if we will do nothing right in a very short time.

There is only one "right solution" and we have to implement it quickly if we want to save us as Humanity and Planet: the SPIRULINA PROJECT.

S.U.M. Association
United States/Peoples of the World*

**The disappearance of the ozone layer
can determine the end of Life on Earth**

SPIRULINA PROJECT

**LET'S SAVE THE PLANET
WITH "OPEN AIR" SPIRULINA ALGA CULTIVATIONS**

Life on Earth is been able to be born only after the creation of the ozone layer that has formed over millions of years around the Earth's atmosphere due to the activity of blue-green algae. To these organisms we owe the oxygen currently present in the atmosphere, the same oxygen that allowed the creation of the protective ozone layer (O₃). The large "roof" of ozone has allowed the life to leave the waters to conquer the dry land without suffering the effects of harmful solar ultraviolet radiations. Our life therefore depends completely on the ozone layer.

In recent decades, however, the ozone layer has begun to thin due to the effect of many dangerous pollutants released by man into the atmosphere. **Today the thinning of the ozone layer has no longer a gradual, but an abrupt and sudden trend. Above the Antarctic there is a large hole in the ozone layer, another was created at the North Pole.** The lack or absence of ozone in the upper atmosphere causes the natural filter against UVB and UVC rays to disappear, with a consequent increase in the risk of skin cancer and DNA mutations. Gradually the solar rays not filtered inhibit chlorophyll photosynthesis, reducing plant growth and the production of ocean phytoplankton (the first link in the marine food chain). The carcinogenic and deadly ultraviolet UVB and UVC radiation have already increased by around 1400%. The solution for this problem is offered by the spirulina alga which has the property of absorbing huge amounts of CO₂ (carbon dioxide) and transforms it into oxygen, thus counterbalancing the destruction of the ozone layer and the greenhouse effect, as well as trees do, but they require larger surfaces and very long growth times. In fact, to cancel the greenhouse effect, trees should be planted for an extension that would cover more than ten times the surface of the Earth. While, according to the scholar Daryl Kollman, spirulina absorbs CO₂ so quickly and effectively that an extension of 400,000 miles of this algae would suffice to achieve the same result. However, it is necessary that the spirulina cultivations are located in countries where the warm climate throughout the year, both during the day and at night, allows to cultivate it "in the open air", thus ensuring the release of oxygen in the upper atmosphere and the creation/regeneration of the ozone layer (O₃). **The algae harvested in these crops can also provide a healthy and complete food to the populations of the South of the World, saving them from hunger and malnutrition.**

Spirulina has also the property of chelating heavy metals and poisons from the body and eliminating radioactivity. This alga, used in agriculture, is an excellent fertilizer that rebalances and enriches the soil. It is also successfully used to purify wastewater.

The SUM Association starts the Spirulina Project in India

The SUM Association is carrying out "open-air" organic spirulina cultivations in **India**, at the **International Center for Sustainable Development Amrita Bhoomi - Immortal Planet**, born from the collaboration between our Association SUM and Prof. M.D. Nanjundaswamy, leader of one of the largest peasant movements in Southeast Asia. The Center is located in the Indian state of Karnataka, Chamarajanagar district, and was inaugurated in 2002.

This collaboration has made possible the construction of a "House of seeds" to safeguard the original seeds that are pure, non-hybrid and not genetically modified, that farmers can keep every year for the next sowing, thus becoming independent from the multinationals that sell the dangerous, expensive and fruitless GMOs seeds that have caused the suicide of over 250,000 Indian farmers since 1993. The Amrita Bhoomi Center, which covers an area of 80 hectares, is seat of a School of Agroecology recognized by the international peasant movement "La Via Campesina" as **the most important Agroecology School in all of South Asia**.

***Join us to save Mother Earth!
Let's promote this project all over the world!***

The "First Objective" to be achieved is to collect € 25,000 that will be used to build the tank and all the facilities necessary to start the production of spirulina: artesian well, circulation pump, processing workshop, etc.

**If you want to promote this "Vital Project",
get active immediately, contact us:**

CONCLUSIONS

As you have read in this text, the United States Federal Communications Commission has approved "Elon Musk", the SpaceX Company project. This project plans to send nearly 12,000 satellites to the space to form the largest satellite network of history. Of these 12,000 satellites, 50% can be launched within 6 years from the authorization, the remaining 50% in the following 3 years.

In practice, in order to send satellites into orbit rockets are used, whose fuel is, as we know, based on chlorine, fluorine and other ozone-destroying gases. We know that the gases fluorine and chlorine, contained in space rocket fuels has enormously contributed to the destruction of the "Protective Shield" or Ozone Layer, which surrounds the Earth. This "Shield" protects us from deadly, burnind and carcinogenic UVB and UVC rays.

With the "Elon Max" Project, that is, with 12,000 space rockets necessary to send in orbit satellites for WI-FI, we will end up destroying the little Ozone remaining around the Earth. Therefore the whole Life on Earth is destined to be destroyed, as it is indicated in numerous articles published on our website laviadiuscita.net.

In a few years everything will be annihilated on Earth by UV rays that will have free way due of the total destruction of the Ozone protective coat. In how many years? Perhaps less than nine years, as foreseen in the "Elon Musk" plan, that is the time needed to send in orbit the 12,000 rockets-satellites for communications. Question: for which communications?

If everything will be destroyed, what can we communicate to each other? Let alone the fact that "Elon Musk" project hides a technology with war- military purposes capable of killing from distance and blow up buildings and entire cities, if the rays of the WI-FI satellites are concentrated and directed on specific targets. This has already happened in the past. (See link: <https://laviadiuscita.net/lesplisione-di-tianjin-e-stata-provocata-da-un-arma-spaziale-delpentagono/>).

What to say then of the project, already underway, concerning the air saturation with nanoparticles of aluminum, heavy metals, etc., which should lower the temperature by half a degree of the Earth? Here we should lower human stupidity and that's it. One acts always and only on the effects of problems, see for example global warming, also called "greenhouse effect", which is only the effect of numerous causes such as: pollution, intensive farming, methane of animal dejections, destruction of the Ozone Layer, etc., without ever thinking of solving and eliminating the real causes of the "problem", just mentioned here. We have therefore won, as human beings, the guinness of terrestrial and cosmic stupidity.

And then, with such "guinness", with such "precedents", we ask ourselves why our Extraterrestrials Brothers do not easily communicate with us or do not come down to this planet to try to help us as Humanity. Shouls they contact us, they would be immediately tortured and killed for information, as it has happened in the "Area 51", in Nevada, following the capture of E.T. survivors of disastrous emergency landings.

What to say about the information given here so ? What else can we say?

Here "the Earth is blowing up". It is a matter of life or death very imminent for everyone. Humanity has only a few years left, not only because of the "Elon Musk" project, of the destruction of the Ozone Layer and the consequent soaring global warming, but also for other causes. What are the "other causes"? A possible Third War World, which is in a very advanced state of preparation (see link: <https://laviadiuscita.net/lombra-della-nato-sulle-tensioni-tra-russia-e-ucraina>) and other political programs and destructive plans approved by the politician of the government, that is from our rulers. By now we know that ALL

RULERS approve these "Projects and plans" one after the other, only for personal interests of power and money.

We have been giving the "Solution" for years on the website laviadiuscita.it.

What do you say?

What do you want or we want to do?

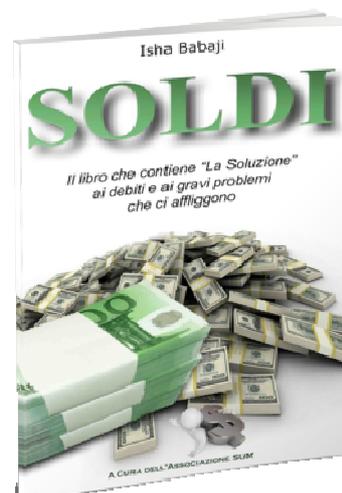

Shall we meet?

Let's talk about it together. The "Benefactors, Saviors and Guardians of Humanity and Planet" do exist!

Let's meet to face not only this "Vital Planetary Emergency" but also all the serious common problems that have been going on for too long. The "Spirulina Project" opens the road to the resolution of all our economic, social, environmental, health, political, war, refugee problems, corruption at all levels, etc. Why? Because all serious problems from which we are afflicted are connected, interconnected, interdependent and they all depend from **corporations**.

"**Corporations**" are formed by bankers, multinationals, lobbies, etc., are the same corporations that, with their deadly products (*GMOs, pesticides, herbicides, dangerous vaccines, innumerable carcinogenic, teratogenic and mutagenic chemical elements, etc.*) and with their gases that destroy the ozone created for the industry, contained in rockets carrying satellites fuels, in aviation, etc., have exterminated the bees, made extinct and continue to extinguish 200 animal species a day, created pollution, hunger, terrorists, terrorism, violence, war, gigantic and inextinguishable public and private debts, bankruptcies, illnesses, HAARP system, chemtrails, etc. etc. As you will have understood, the **corporations** caused the destruction of the Ozone Layer, Equilibrium and Life on Earth. Once we have solved one serious problem, like that of the "Ozone Layer", which is strictly connected to the **corporations**, all other problems (*being connected, interdependent and dependent on the causes of all problems or dependent on the same "corporations"*) can also be solved. If this is for someone "difficult" to understand, it is possible to deepen it by reading the books "MONEY" and "S.O.S. EARTH" (the book "S.O.S. EARTH" is free and can be downloaded in PDF in a few seconds).

To find these books, go to the laviadiuscita.it website on the page: "Books and eBooks LIFE ROJECT" (<https://laviadiuscita.net/ebook-life-project/>).

You are all welcome to work together with us in order to stop this useless holocaust, world eco-genocide, "sixth extinction", or as we wish to call it better.

Peace, Joy, Health, Wellness and Love to all.
